

Questionnaire for developmental issues

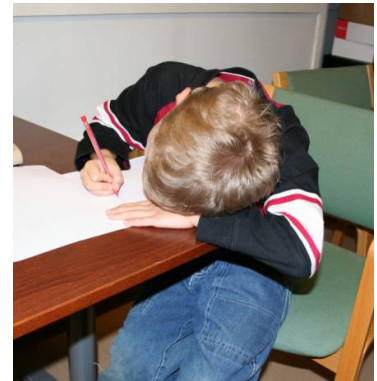

Fill in this form according to the current situation.

Use scores 0 - 4 which measures the number of problems in each question area, i.e., the more problems the person being assessed in that question has, or the more the characteristic presented describes him, the higher the numerical value given.

Scoring: 0 = good, no problems, 1 = little difficulty or little trouble, 2 = already more difficult, more problems, 3 = a lot of problems, clearly a lot of difficulties, 4 = very big problems, difficult or unable to complete the task.

Posture

Poor posture, forward stooping posture, neck in forward protruding position? (4 if poor posture) The sitting position while watching books or drawing? -bending over the table, so-called lying position (although there is no fault in the eyes, normally sees from the so-called reading distance)? 4 if lying down sitting position.

0 1 2 3 4

Sensitivity profiling

Is the child exceptionally timid and tense, especially in new situations? (4 if very timid)

0 1 2 3 4

Are changing situations particularly difficult and distressing, do you need to prepare the child carefully for new or changing situations? (4 if changing situations are very difficult)

0 1 2 3 4

Do the child have clear sensory hyper-sensitivities? For example hypersensitivity to hearing, hypersensitivity to touch sensation, hypersensitivity to smell or taste or bright lights (photosensitivity), can have also enlarged pupils? If hyper- sensitivities => 4

0 1 2 3 4

Do the child have intense alienation when meeting new people or intense performance excitement? If

yes=>4

0 1 2 3 4

the Oral tensions?

Do the child constantly suck on stuff, the thumb, pen, shirt collar, etc.? (4 if sucking continuously something, especially when stressed)

0 1 2 3 4

Do the child have oral motor difficulties?, speech and articulation difficulties? Messes up while eating, difficult to control the mouth area?

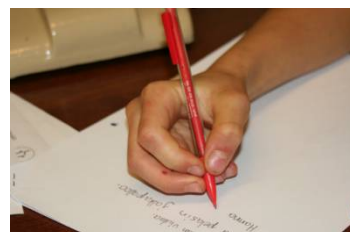

0 1 2 3 4

Hand tensions?

Do the child have a squeezing pen grip, an abnormal pen grip, a fist-like or other abnormal pen grip?

4 if very compressive or so-called abnormal pen grip.

Not pressing pen grip =>

In pictures abnormal or pressive pen grips.

0 1 2 3 4

Is handwriting or pen use less developed than its age? (if one can write). Is the handwriting large, the letters are different in size, the lines are drifting (not straight), the writing bends upwards, or the paper is placed very skewed when writing?

0 1 2 3 4

Extra tension in hands when, for example playing an instrument, using tools, etc.

0 1 2 3 4

Sitting

Difficult to sit still, it is like there are ants in the pants? Yes=4

0 1 2 3 4

Does the child often change position while sitting, often the so-called lying down-position? Yes = 4

0 1 2 3 4

Do the child often sit on his feet or do often rotate the legs around the legs of a chair? 4 if sits in a chair often on his feet.

0 1 2 3 4

Do the child read / view books while lying down rather than in a sitting position? Often = 4

0 1 2 3 4

Auditory problems?

Do often misunderstand the questions? Asking often asking "WHAT did you say"?

0 1 2 3 4

Is the child pronouncing the heard words or sounds incorrectly. Not pronouncing some sounds, or sounds often converted into others?

0 1 2 3 4

Has speech development been delayed? (4 if there was a delay in speech development)

0 1 2 3 4

Poor memory, the so-called narrow proximity memory? Do not remember what was just said. (4 if poor memory)

0 1 2 3 4

Concentration

Can the child complete the task he started? (4 if tasks are usually missed)

0 1 2 3 4

Do the child often start new tasks while the previous ones are still in progress? (4 if you continue with new ones often, even if the previous ones are in progress)

0 1 2 3 4

Are there problems in concentration?

0 1 2 3 4

Motor skills

Is the child clumsy?

0 1 2 3 4

Do the child have coordination problems?

0 1 2 3 4

How to cope with sports and (child) games?

0 1 2 3 4
